**Abstract.** This article discusses the impact of fundamentals on stock prices Islamic banking is based on four metrics: ROA, EPS, NPM and DER. Highly profitable companies increase the returns they generate investor. But actually some companies have ROA, EPS and NPM DER falls, stock prices rise, and vice versa. Company Performance is the end result of a management process over a period of time Another to make sure the company is in good or bad shape. This research Aims to answer the question in terms of its formulation, i.e. um Determining the impact of ROA, EPS, NPM and DER on Islamic stock prices bank. This type of research is the quantitative type that uses time series data. Use targeted sampling techniques to measure samples and Data analysis using classical hypothesis testing, hypothesis testing, etc. Multiple regression analysis. The results show that ROA, NPM and DER each indicator has no significant effect on the stock price, while EPS had a significant effect on stock prices. The simultaneous test shows that ROA, EPS, NPM and DER have a significant effect on stock prices.

**Keyword:** ROA, EPS, NPM, DER and stock
