ABSTRACT

The Inventory of Medical Plants in Sebatik Sub-District Nunukan Regency of North Kalimantan Province (Supervised by Andi Amaliah Dahlia and Virsa Handayani). The research aims to conduct an inventory and to discover the types of plants, and ways of using and processing the herbal remedies used by the society in the Sebatik subdistrict of Nunukan, North Kalimantan. The research was done by surveying with an observational method, in which questionnaires and interviews were given to the medicaster, public figures, and the society who have a purposive sampling. The results indicated that there are 24 ordos, 31 family, 31 genera and 32 species of plants that have the potential to be traditional medicines. Communities in district Sebatik of Nunukan, North Kalimantan province used herbs to treat various diseases. It can be processed through boiling, mashing, patching, grating, brewing or blending. The ways of using the remedies can be by drinking, patching, or smeared.
